

To whom it may concern

Hi, my name is Harrison. I am a third-year student at the University of Toronto in the Bachelor of Information program. I am interested in the Data Analyst position. My acquaintances describe me as an extrovert and an active person, as I enjoy interacting with people and thrive in a social environment. I spent most of my life in Taiwan and also a few years in the U.S.

It all started with “`system.out.println(hello world)`” in middle school to many projects throughout high school and university. I bounced around many different courses. In the end, I realized that coding and creating projects is what I enjoy the most out of all the courses I took. Therefore, I transferred out of my Statistics Major into the Bachelor of Information.

The program provided classes that ranged from information theory to actual programming classes. In one of the classes that I enjoyed the most, we had group projects using Arduino kits to build computers that had to meet certain requirements. I mostly took part in leading the coding parts as I enjoyed it the most. The professor in the class worked for AWS and she inspired my interest in code to be combined with the world of data. After talking and learning what it is like to work as a data scientist, creating models, testing the model, and running analysis to create meaning in the collected data seemed very interesting to me. I am also currently taking a class this year that dives more into Rstudio doing data clean-up, analysis, and visual presentations. In addition, I am currently using my free time to learn SQL.

With my experience and the current classes that I am taking, I firmly believe I would be a strong candidate for these types of jobs. I also have a strong thirst for new knowledge, so I would not be stopped by challenges and instead will overcome and learn from them constantly. You can reach me at 647-545-4201, or by email at harri.huang@mail.utoronto.ca. Thank you so much for your consideration and time.

Sincerely,

Harrison Huang
